|---|---|
| Semester  | I   |
| Course  | Major   |
| Paper Code  | C1PH230112T / C1PH230112P   |
| Paper Title   | Mathematical Methods I and Computation Lab I  |
| No. of Credits  | 4 (Theory – 3 and Lab – 1)  |
| Theory / Practical / Composite                                    | Composite   |
| Minimum No. of preparatory hours per week a student has to devote | 4   |
| Number of Modules   | 2   |
| Syllabus  | <p><b><u>Math Methods 1(Theory- 3 credits)</u> [36 L]</b></p> <p>Vectors: essentials, Scalar and vector products. Coordinate systems and transformation, Transformation of vectors under rotation and reflection: Pseudo scalars and pseudo vectors, examples. Triple products: expression using <i>suffix notation</i>, Reciprocal space. Vector equations of planes and surfaces. Vector functions of a scalar variable: trajectories as parametric curves, tangent and normal vectors, curvature and radius of curvature, kinematics.</p> <p>[12 L]</p> <p>Coordinate systems: Cartesian, cylindrical and spherical systems.</p> <p>Distribution functions: elementary properties of the Dirac delta function and Heaviside step functions: interrelationship.</p> <p>Fields of Physics: Gradient, divergence, curl: properties, Vector integrals and Integral theorems (heuristic proof only). Proving related identities by algebraic manipulation and also using the suffix notation.</p> <p>[18 L]</p> <p>Formulation of Physics problems using first order derivatives. Isoclines and Direction fields</p> <p>[6 L]</p> |

|                                |   |                      |
|--------------------------------|---|----------------------|
| <p>Learning Outcomes</p>       | <p>(1) Will be able to handle Scalar and Vector Fields Comfortably (module A)</p> <p>(2) Will be able to translate between various coordinate systems (module A)</p> <p>(3) Will be able to visualize solutions to differential equations as direction fields (module A)</p> <p>(4) Development of visual techniques for curves and surfaces (module B)</p> <p>(5) Develop basic capabilities in handling data (module B)</p> <p>(6) Will be able to write small scripts using Python (module B)</p> <p>(7) Will be able to help in future study of GPS, Geo-sciences and Mathematical Modelling in diverse fields of studies. (module A)</p> <p>(8) Will complement (7) through computer aided techniques and programming (module B)</p>   |                      |
| <p>Reading/Reference Lists</p> | <p><b>Module A</b></p> <ol style="list-style-type: none"> <li>1. Online refs.: Kreyszig</li> <li>2. Mathematical Methods for Physicists, G.B. Arfken, H.J. Weber, F.E. Harris, 2013, 7thEdn., Elsevier.</li> <li>3. Mathematical Tools for Physics, James Nearing, 2010, Dover Publications.</li> <li>4. Mathematical Physics, Goswami, 1st edition, Cengage Learning</li> <li>5. Advanced Engineering Mathematics, Erwin Kreyszig, 2008, Wiley India.</li> <li>6. Essential Mathematical Methods, K.F.Riley &amp; M.P.Hobson, 2011, Cambridge Univ. Press</li> <li>7. Mathematical methods in the Physical Sciences, M. L. Boas, 2005, Wiley</li> <li>8. Vector Analysis, Murray R. Spiegel, Schaum Series</li> <li>9. Introduction to Electrodynamics by David J. Griffiths</li> </ol> <p><b>Module B</b></p> <ol style="list-style-type: none"> <li>1. Main online Refs: Langtangen, Kong et al</li> <li>2. Computational Physics, D.Walker, 1st Edn., 2015, Scientific International Pvt. Ltd.</li> <li>3. Computational Physics Mark Newman, CreateSpace Independent Publishing Platform (2012)</li> <li>4. Computational Physics: Problem Solving with Python, 3rd Edition, Rubin Landau, Manuel J. Paez, Cristian C. Bordeianu</li> <li>5. Learning Scientific Programming with Python, Christian Hill, CUP</li> <li>6. Scientific Computing in Python (Revised edition, Python 3), Abhijit Kar Gupta</li> </ol> |                      |
| <p>Evaluation</p>              | <p>Theory: 60</p>   | <p>Practical: 40</p> |

|  |   |                                      |
