

ECOLOGY

1. Remembering:

- Define key terms and concepts related to ecology, conservation, and sustainable development.
- Recall different methods and approaches for conducting environmental impact assessments.

2. Understanding:

- Explain the importance of conservation and sustainable development in maintaining ecological balance.
- Understand the various factors that contribute to environmental impact and the need for assessments.

3. Applying:

- Apply knowledge of ecology to analyze and assess the environmental impact of human activities on ecosystems.
- Develop and propose strategies for conservation and sustainable development based on environmental impact assessment findings.

4. Analyzing:

- Evaluate the effectiveness of conservation measures and sustainable development initiatives in addressing environmental challenges.
- Analyze case studies of environmental impact assessments to identify potential risks and benefits for ecosystems.

5. Evaluating:

- Critically assess the role of government policies and regulations in promoting conservation and sustainable development.
- Assess the ethical implications of human activities on the environment and propose solutions for mitigation.

6. Creating:

- Design and implement a comprehensive environmental impact assessment plan for a specific project or development.
- Develop innovative conservation strategies that prioritize both ecological sustainability and human well-being.
