

<b>Semester</b>	<b>3</b>	
<b>Course</b>	<b>Core</b>	
<b>Paper Code</b>	<b>C2DS250312T / C2DS250312P</b>	
<b>Paper Title</b>	<b>Data Structure and Analysis of Algorithms</b>	
<b>No. of Credits</b>	<b>4</b>	
<b>Theory/Composite/ Practical</b>	<b>Composite</b>	
<b>No. of Classes per week</b>	<b>Theory: 3, Practical: 2</b>	
<b>Minimum no. of preparatory hours per week a student has to devote</b>	<b>4</b>	
<b>Number of Module</b>	<b>1</b>	
<b>Syllabus</b>	<p><b>Unit 1:</b> Introduction to Data structures: Abstract data types, Arrays, Linked Lists, Stack, Queues, Circular Queues. (8)</p> <p><b>Unit 2:</b> Introduction to Algorithms: Algorithms design principles, Analysing Algorithms – Time and space complexity, Iterative and recursive algorithms, Asymptotic notations and their significance. (4)</p> <p><b>Unit 3:</b> Trees: Binary trees, Traversal techniques, Binary search trees, Hashing, Concept of Heap. (8)</p> <p><b>Unit 4:</b> Searching and Sorting: Linear search, Binary search, Bubble sort, Insertion sort, selection sort, Merge sort, Quick sort, Worst and average computing complexity, Median and order statistics. (10)</p> <p><b>Unit 5:</b> Algorithm Design Paradigms: Divide and conquer, Greedy, Dynamic programming and Backtracking with suitable examples. (5)</p> <p><b>Unit 6:</b> Computational Complexity classes: Introduction to NP-completeness, P class, NP-hard class, NP complete class. (4)</p>	
<b>Learning Outcomes</b>	<ol style="list-style-type: none"> <li>1. Use the fundamental data types for computing (lists, stacks, queues, binary trees, etc.).</li> <li>2. Properly use and select data structures from language-provided data-structure libraries.</li> <li>3. Understand basic algorithm analysis.</li> <li>4. Understand how recursion works and write programs using recursion to solve problems.</li> <li>5. Make informed decisions about which sorting and searching algorithms to use in specific circumstances.</li> <li>6. Be able to implement a program using an algorithm and appropriate data structure.</li> </ol>	
<b>PRACTICAL</b>	Based on theory topics using Python	
<b>Reading/Reference List</b>	<ol style="list-style-type: none"> <li>1. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, “Introduction to Algorithms”, MIT Press, 3rd Edition, 2009.</li> <li>2. Ellis Horowitz, Sartaj Sahni, Sanguthevar Rajasekaran, “Computer Algorithms”, Silicon Press Publications, 2 nd Edition, 2008.</li> <li>3. Ellis Horowitz, Sartaj Sahni, Dinesh Mehta, “Fundamentals of Data Structures using C++”, 2 nd Edition, Universities Press, 2008.</li> <li>4. Alfred V. Aho, John E. Hopcroft, Jeffrey D. Ullman, “Data Structures and Algorithms”, Pearson, 1 st Edition, 2006</li> <li>5. S.Sridhar, “Design and Analysis of Algorithms”, Oxford University Press, 2015</li> </ol>	
<b>Evaluation</b>	Theory CIA: 15 Sem Exam: 45	Practical CA: 40 Sem Exam: NA
<b>Paper Structure for theory Sem Exam</b>	Short questions (5 marks each)	Long questions (15 marks each)
	3 out of 5	2 out of 3
